NurAid™ is a trademark of Moleac. MLC601 (NeuroAid™) and MLC901 (NeuroAid™II / NurAid™II) are 2 different proprietary formulae which have been shown to be equivalent in pharmacology and are referred as "NurAid™II" in this document.

## Treatment for post-stroke recovery

## Optimise your recovery with NurAiD™II

NurAiD™II is an oral food supplement made from 9 herbal ingredients\* developed to help stroke victims to regain independence.

A stroke is caused by a disruption in the blood flow supplying the brain with oxygen and nutrients. The disruption of blood supply has a devastating impact on brain cells, which start dying within a few minutes and are permanently lost.

The severity and location of the damage will determine the associated disabilities. For example, if the stroke impacts the brain area responsible for speech, the victim will have speech deficit. Therefore, multiple post-stroke disabilities are possible (speech difficulty, visual deficits, movement impairments etc).

## NurAiD™II amplifies the restoration of the brain

The brain has a natural ability to repair itself via two mechanisms:

- **Neuroplasticity:** Neurons that have not been affected by the stroke can take over the role previously performed by the damaged neurons.
- **Neurogenesis:** Newborn neurons can be generated inside the brain to replace the damaged ones. These new neurons create connections with existing ones to rebuild neuronal networks.

Neuroplasticity and Neurogenesis are essential for recovery. NurAiD™II significantly amplifies both mechanisms by creating a supportive environment to enhance the brain's restoration, improving the odds of achieving independency after a stroke.

## NurAiD™II acts as booster for your recovery

Clinical trials have demonstrated that patients taking a 3-month course with NurAiD™II improve their recovery and see a reduction in their deficits:

Benefits are observed as early as 3 months following the stroke.

49% increase in the chance of reaching independence at 6 months after starting the 3 month treatment course.

NurAiD™II provides persisting benefits with significant improvement observed up to 18 months following a stroke.

Well established safety and quality profile.

## How to take NurAiD™II?

To get the most benefits from NurAiD™II, it is essential to comply with the recommended dosing schedule:

2 capsules, 

3 times daily   

For a **minimum of 3 months**

**Capsules should be taken as a whole. In case of swallowing difficulties, the capsules can be opened and the content diluted in water.**

**Time is crucial for recovery, start NurAiD™II as early as possible in addition to a rehabilitative program and preventive treatments.**
